

MEASURED CRITERIA TABLE

Decision: _____

<u>CRITERIA</u>	<u>OPTION #1</u>	<u>OPTION #2</u>	<u>OPTION #3</u>	<u>OPTION #4</u>
<u>TOTAL POINTS:</u>				

Instructions: List all of the criteria (factors) you need to consider in making the decision in the Criteria column. Then score each Option on a one-to-ten scale for each criterion. For example, if you are deciding which car to buy and you have listed safety as a criterion, you would score each Option for safety on the one-to-ten scale. Add the scores for each criterion for each Option to see how they compare. You can add additional Option columns to compare more Options.
